THE CASE

AI music isn't going away. It needs a home of its own.

The major streaming platforms are being flooded with AI-generated music. As volumes continue to grow, the traditional music industry is already changing the rules.

Some platforms, distributors and publishers are introducing restrictions on AI-created music, and we expect these requirements to become much tougher as the industry evolves.

AI Stage is built specifically for the new generation of AI artists. We are more than a streaming platform — it is a meeting place where AI artists showcase their music, build an identity and grow an audience.

As access to traditional platforms becomes more challenging, having a dedicated home for AI music will become increasingly important.

And this is only the beginning. AI Stage is building an ecosystem for AI artists and listeners — bringing together music, discovery, promotion and community.

AI music isn't going away. It's growing. The question is no longer whether AI music will become part of the industry. It already is.

Where AI artists meet their audience.

Honest labels, fair discovery, real community.

WHAT MAKES IT DIFFERENT

01 Honest AI labels

Every release carries a visible AI-origin badge, tool disclosure and provenance — no guessing what you're hearing.

02 Zero-play discovery

Recommendations are built from the sound of the music itself, so a day-one release can reach you without any play history.

03 Story Behind the Song

Our signature section: the context, the process and the meaning that turns a play into a real fan.

04 Community-first

Rooms, chats and official artist communities keep the conversation alive between releases.

FOR LISTENERS

Hear it first.

Everything new, surfaced fairly — not just what already has a million plays.

01 13 always-on stations

Global, Afrikaans, English, Country, Pop, Rock, Gospel, Electronic, Chill and more — each with its own AI DJ personality.

02 AI DJ on request

Describe a mood in plain words and get a hosted set with voice links, tempo and energy matching — or a silent mix.

03 Discovery feed

A full-screen, swipeable feed of fresh drops and personal picks. Like, comment, save or follow straight from the card.

04 Mixes made for you

Personal mix, song and artist radio, "Because you liked..." and New for you — built from the sound itself.

05 Search that understands you

Type a feeling — "rainy Sunday Afrikaans guitar" — and get real matches, plus genre, mood and advanced filters.

06 Listening rooms

Play in perfect sync with friends in a WhatsApp-style room chat with replies, reactions and a shared queue.

07 Live shows and replays

Watch artists broadcast live with chat, polls and tipping, or catch the archived replay on demand.

08 No data, no worry

Install like an app, download albums and playlists, and browse your library with zero signal.

09 Sound you can tune

Adaptive streaming that survives weak signal, loudness normalisation, EQ, compressor, sleep timer and a drag-to-reorder queue.

10 Your Rewind

A monthly recap of your listening — minutes, top tracks and artists, your AI-versus-human split — with a shareable card.

COMMUNITY & DISCOVERY

Music is better with people.

Communities, charts, conversation and context — the parts that turn a catalogue into a scene.

01 Artist communities

Every artist gets an official community — a WhatsApp-style group chat where fans and the artist talk daily, with verified artist and moderator badges.

02 Moderation the artist controls

Owners and moderators pin announcements, remove messages, mute or remove members, with a full moderation log behind the scenes.

03 Rooms flow into community

When a listening session ends, "Continue in community" keeps the conversation going.

04 Weekly Top 20, 50 and 100

Fresh charts every week across the whole catalogue, so new releases climb on merit.

05 Weekly featured artist

One artist takes the spotlight each week — chosen from real listening signals, not paid placement.

06 Following and Activity

Two tabs in one place: new releases from artists you follow, and every like, comment, follow and reply you've received.

07 Release alerts

Push notifications and email fallbacks the moment an artist you follow drops something new.

08 Embeddable previews

Copy-ready embed code for a 30-second preview player you can drop into any site or blog.

09 Song stories and lyrics

Read the Story Behind the Song and follow synced lyrics while the track plays.

10 Fan tipping is live

Support an artist directly from their profile or a live show; artists can convert tips into song credits.

FOR ARTISTS

Release like a label.

Upload, protect and promote your catalogue from one portal — no distributor required.

01 Live in under 5 minutes

Upload, declare, publish. Automated moderation checks each release the moment it lands — no human queue.

02 Uploads that survive bad signal

Resumable uploads up to 100 MB per track, WAV or MP3/AAC, with ISRC, UPC and tag import handled for you.

03 Duplicate protection

Audio fingerprinting checks every upload against the catalogue before it goes live, with waveform match evidence.

04 SmartLinks

One shareable link per release with pre-save, rich social previews and per-click analytics.

05 Your own community

Pin announcements, appoint moderators, and turn listeners into a scene that sticks around between releases.

06 Promo asset studio

Generate on-brand release graphics for social in a couple of clicks — sized for every feed, no designer needed.

07 Live Studio

Go live, invite guests, run polls, take tips, moderate chat and publish the replay when you're done.

08 You own your catalogue

Delete any of your own songs permanently at any time — audio, artwork, stats and links removed everywhere.

09 Real numbers

Plays, saves, shares, listener countries and CSV export, plus credits, splits, tips and payout tracking.

10 Story Behind the Song

Give every release the context that turns a casual play into a returning fan.

STARTING OUT

Simple, honest pricing.

FREE

R0

96 kbps streaming, 3 months of Premium free on signup. No card needed.

PREMIUM

R19.99 / mo

128 kbps AAC, radio, rooms, AI DJ, offline listening and live shows.

PROFESSIONAL

R29.99 / mo

256 kbps AAC HiFi, the highest upload allowance and full artist tooling.

WHAT'S NEXT

01 Royalties & payouts

Transparent per-play accounting with split management built into the artist portal.

02 Licensing marketplace

Let creators licence AI-assisted and independent tracks directly from the song page.

Take the stage.

Listeners: press play. Artists: create your profile and upload today.
